

ENERGY

Charles County supports the committed efforts of Energy providers as they strive to provide cost-effective, sustainable energy solutions and ensure a robust infrastructure that will meet the County's current and future energy requirements.

Come and join the Energy revolution in Charles County. ..

A Rich Heritage...

For decades, reputable energy providers have been part of the Charles County landscape. Southern Maryland Electric Cooperative (**SMECO**) has been providing electrical service to businesses and residents since 1937.

Morgantown Generating Station has been generating electricity since 1970. **The Wills Group Inc**, now in business for 80 years, is the largest energy provider and transporter in the region.

Planning for the Future...

Come and join the Energy revolution in Charles County. We are not only looking at alternative energy sources but encourage environmentally friendly production of the energy. We have a great start with two solar farms, and updates to generating facilities utilizing natural gas, a cleaner fuel source. See how **Morgantown** is repurposing fly ash and reducing the green house effect.
